

Cabled-11_TN382_Discrete_Summary Information:

File Mapping:

Hex files were renamed from the original ship-provided files for consistency and ease of processing. Original file names are listed below on the left, with corresponding new file names on the right. Original Hex files are accessible for each cruise in the Cruise Data folder under the “Ship Data” sub-directory. Bottle files used to populate the discrete summary can be found in the Water Sampling sub-directory under “Shipboard Data”.

General File Notes:

- Fill value = -9999999
- Carbon analysis was provided by Burke Hales lab at Oregon State University. Calculated carbon parameters were provided by Hales using custom software routines using published values for the various carbon chemistry constants. Hale's lab provides the following references regarding constants used in the calculations. For further information, please contact Burke Hales (bhales@coas.oregonstate.edu).
 - Carbonic acid dissociation constants: Millero (2010), with full resolution constants provided by Millero via private conversation, equal to Lueker's constants at $S > 25$).
 - K_w : Millero (1995)
 - K_b : Dickson (1990)
 - K_{sp} for calcite and aragonite: Mucci (1980)
 - K_h : Weiss (1973)
 - Alkalinity is modeled as: $\text{HCO}_3^- + 2\text{CO}_3^{2-} + \text{B(OH)}_4^- + \text{OH}^- - \text{H}^+$
